

R Installation Guide – Mac

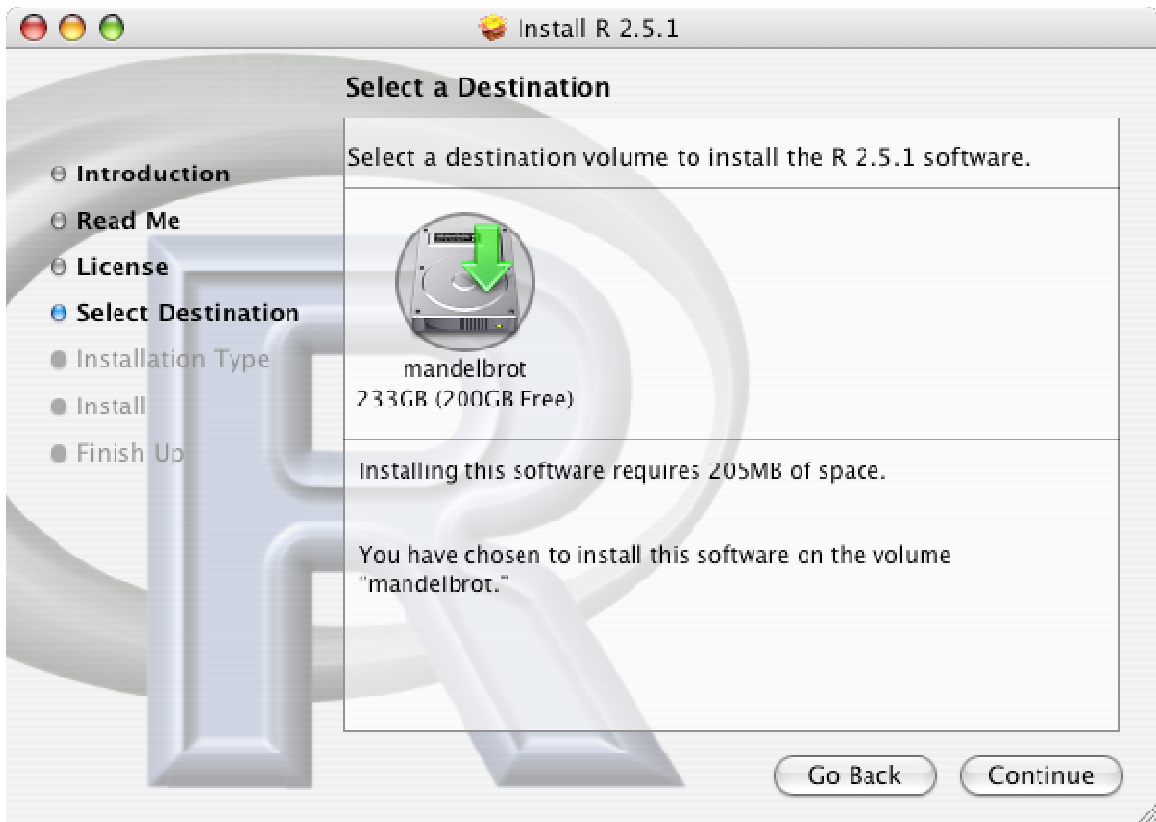

Go to R's website at <http://www.r-project.org/index.html>, on the side bar under **Download** click CRAN. Under **USA** choose an institute near you to take your image from.

Mac OS X > R-2.6.2.dmg

In the dialog window select **Save File** to download the file. Once it has done downloading open the file.

Double click the install icon as prompted, this will open an installation guide, hit **Continue** > **Continue** > choose which language you would like (default English) > **Continue** > **Agree**

Select your hard drive as the location for installation > **Continue** > **Upgrade**

R will now begin installing, when it has successfully finished hit **Close**. Close the first window.

Go to **Finder > Applications > R**

Once R opens go to **Packages and Data** on the menu, select **Package Installer > Get List**, choose Rcmdr from the list and click **Install Selected**, once it finishes close the window.

Select the **X** icon on the R Console to open X 11, which allows Rcmdr to run. Type in **library(Rcmdr)** in the R Console to run Rcmdr.

Happy statistics!
